Sri Lanka Consumer Confidence: *Consumer confidence changed little in June, remaining at pessimistic levels*

All indices remain at pessimistic levels, with the public continuing to have low expectations for the economy's future

The Institute for Health Policy (IHP) released today the June 2023 update of its Consumer Confidence Indices, which are generated from its Sri Lanka Opinion Tracker Survey (SLOTS).

The Index of Consumer Sentiment (ICS), the broadest measure of the public's view on their personal economic status and the national economy changed little, decreasing 1 point to 24 points in June. The ICS ranges from zero to a potential maximum 100, with levels below 50 indicating net pessimism.

The Index of Consumer Expectations (ICE), a measure of perceptions of the future, decreased 2 points to 31, suggesting that overall confidence in public expectations about the short and long-term future of the country may be waning since gains in April 2023.

The Index of Current Conditions (ICC), a measure of perceptions of current conditions, also changed little, increasing 1 point to 13 points.

Changes in IHP Consumer Confidence Measures in the last month

Measure	↓↑↔	June 2023	May 2023	April 2023	March 2023	February 2023	January 2023	December 2022
Index of Consumer Sentiment (ICS)	↓ 1	24	25	26	17	12	15	16
Index of Consumer Expectations (ICE)	↓ 2	31	33	35	22	17	22	22
Index of Current Conditions (ICC)	↑ 1	13	12	13	9	6	5	8
Personal Financial Situation (last 12m)	↔ 0	16	16	15	11	5	6	8
Personal Financial Situation (next 12m)	↑ 3	31	28	35	23	20	23	22
Country Situation (next 12m)	↓ 3	27	30	27	18	12	16	18
Country Long-Term Prospects (next 5y)	↓ 6	34	40	43	26	19	28	26
Current Buying Conditions	↑ 3	11	8	10	6	6	3	8

Institute for Health Policy Sri Lanka Opinion Tracker Survey

Estimates based on 4,036 interviews conducted by SLOTS from Dec. 01, 2022–Jun. 30, 2023. Monthly values derived after weighting responses to be nationally representative according to gender, age, ethnicity, education, sector, province, and socioeconomic status.

About IHP

IHP is an independent, non-partisan research centre based in Colombo, Sri Lanka. The SLOTS lead investigator is Dr Ravi Rannan-Eliya of IHP, who has trained in public opinion polling at Harvard University and has conducted numerous surveys over three decades.

Methodology

SLOTS combines data from a national sample of adults (ages 18 and over) reached by random digit dialling of mobile numbers, and others coming from a national panel of respondents who were previously recruited through random selection. All consumer confidence index estimates are weighted to be representative of the national population, including characteristics such as age, gender, province, sector, socioeconomic status, ethnicity and education.

Funding

The SLOTS has been funded by the Neelan Tiruchelvam Trust, the UK National Institute for Health and Care Research (NIHR), The Asia Foundation in Sri Lanka, and others, but the sponsors play no role in the study design, analysis, or interpretation of findings. Interested parties can contact IHP for more detailed data and results.
